

Sravan Pattabhi

Full-Stack AI Engineer

Virginia, USA | sravan.pattabhi97@gmail.com | linkedin.com/in/sravanpattabhi | github.com/sravanpattabhi | sravanpattabhi.github.io

SUMMARY

Full-stack AI engineer building production systems end to end — React and Node.js fronts, Java/Spring Boot and Oracle APEX/PL/SQL backends, Kafka event streams, and AI-agent tooling on MCP servers — across AWS, Azure, and OCI. Best at turning manual, error-prone engineering workflows into reliable automated ones, and at shipping software that holds up in production.

EXPERIENCE

Oracle

Apr 2025 – Present

Senior Software Development Engineer — Health & AI Applications · Remote, VA

- Built a full-stack platform automating how engineering issues get created, routed, and resolved across Jira and Slack — React/TypeScript UI on an Oracle APEX, PL/SQL, and OIC backend.
- Wrote AI-agent skills on MCP servers that catch reliability problems early, flagging CPU spikes, internal server errors, and auth failures before they reach customers.
- Built the routing engine weighing severity, workload, ownership, PTO, and US/IDC timezone coverage, ending hand-assignment of work.
- Led hotfix and release-coordination tooling with a multi-stage deploy flow (stage → non-prod → prod), backward-compatible with the legacy single-track setup.
- Built Dev Engage, turning raw issues into ready-to-work tickets with full technical context; added Slack-native threads, scoped channels, and live status updates.
- Designed the resilient PL/SQL data layer (retry-safe logic, state validation, automatic recovery); mentored engineers and wrote onboarding docs.

Walmart

Oct 2024 – Apr 2025

Senior Software Engineer — Store Finance · Reston, VA

- Led a team of 7 developers delivering the Clearance & Rollback Events store system from POC to production.
- Developed scalable Java Spring Boot microservices and REST APIs processing in-store and store-to-store business events.
- Streamed events in real time through Kafka into Cosmos DB; deployed on Kubernetes in Azure with Grafana monitoring.
- Raised Sonar coverage from 65% to 85% with JUnit and Cucumber; resolved Snyk vulnerabilities and load-tested with JMeter.
- Built automated job-status and pipeline-failure alerting via Spotlight and Slack; performed RCA with BigQuery and Splunk.

Digital HIE

Jul 2023 – Oct 2024

Senior Software Engineer · Chantilly, VA

- Architected and built Leap, a referral-management system for clinicians, in React/TypeScript, MUI, and Node.js.
- Built the referral-processing engine in Node.js querying Athena EHR on triggers; implemented a FHIR server on Azure with OAuth2 and role-based access control.
- Developed MyCarePlanner (OHSU), a HIPAA-compliant React/TypeScript patient app integrating FHIR APIs across Cerner, Epic, and VA systems.
- Added Azure AD authentication, customizable MUI data grids, automated charts, and dynamic questionnaires for patient engagement.

University of Illinois Chicago

Aug 2022 – May 2023

Technical Graduate Assistant — Web Development · Chicago, IL

- Enhanced the college library website in ReactJS — responsive redesign, performance optimization, and backend data integrity — delivering weekly via Kanban.

Capgemini

Aug 2019 – Aug 2021

Senior Software Engineer · Hyderabad, India

- Lead engineer on the Child Support claims project for Northbridge Insurance, coordinating four cross-functional dev teams.
- Designed Nav-Docs, a Java document-management application for insurance claims; built and end-to-end tested Java REST APIs.
- Prototyped the team's first CI/CD pipeline with GitHub Actions; containerized applications with Docker on AWS ECS/ECR.
- Tripled unit-test cycle performance by redesigning XML schemas to JSON; automated cross-browser testing with Selenium.

SELECTED PROJECTS

- **Cairn** — a job-search engine with ATS-direct sourcing, fail-soft adapters, explainable scoring, and an append-only status history; Python/Flask, dual SQLite/Postgres backend, ~100 CI-gated tests. Private repo.
- **Trading Lab** — a paper-trading-first algorithmic trading system; every strategy must survive backtests and forward validation before promotion. Python.

EDUCATION

Master of Science, Computer Science — University of Illinois Chicago

SKILLS

Languages	Java, TypeScript/JavaScript, Python, SQL, Shell, C++
Frontend	React, Angular, HTML/CSS, MUI, Tailwind
Backend	Node.js, Spring Boot, microservices, REST APIs, Apache Kafka
AI / Agents	MCP servers, AI agents & agentic workflows, LLM integration, AIOps
Cloud	AWS (EC2, S3, Lambda, EKS, ECS, DynamoDB) · Azure (App Services, AD, Health Data Services, Cosmos DB, AKS) · OCI (APEX, PL/SQL, OIC)
Data	PostgreSQL, MySQL, MongoDB, Cosmos DB, IBM Db2, SQLite
Healthcare	HL7 v4.x, FHIR, SMART on FHIR, Cerner/Epic API integration, EDI X-12
Observability	Splunk, Grafana, CloudWatch, Prometheus
Testing	JUnit, Cucumber, Mockito, Selenium, pytest

CERTIFICATIONS

- MCP: Build Rich-Context AI Apps with Anthropic — Anthropic × DeepLearning.AI
- Oracle Database SQL Certified Associate
- Certified Intermediate HL7 FHIR with SMART CDS Hooks
- Microsoft Azure Fundamentals (AZ-900)
- AWS Cloud Practitioner
